

MONTHLY FACTSHEET

Sustainable Return

June 2024

This document is marketing material. It is only intended for Professional Investors. Please refer to the Prospectus before making any final investment decisions. Investments pose a risk. Performance, Portfolio Breakdowns and Net Assets information as at: 28-06-2024. All other data as at 18-07-2024.

Promising first half

During June, the risk sentiment remained strong and risk premia lower than in the last two years. The fund yielded +0.35% during the month (+4.21% YTD) driven by (i) continued high coupons thanks to high underlying base rates; and (ii) stable prices across the board.

The continued risk sentiment in June is a reflection of both investors' current risk-on approach (despite EU parliament elections and the consequential upcoming French election) and a common seasonality pattern with traditional fund managers stocking up on yielding credit ahead of the slower summer months. In contrast to that, we remain active throughout the summer and often make some of our best investments during this time. For example, we can top up current holdings through buying bonds from daily traded funds with unexpected outflows which consequently become forced sellers in a thin summer market.

We continue our work with our investment in Sunborn, the Finnish property company which was not able to refinance its outstanding bond ahead of maturity in May. In June, we spent a full day in Turku visiting both hotels and met with local management and shareholders. We have a good starting points for negotiations including a strong security package with very limited other debt in the structure and the dialogue with the shareholders is constructive. Having that said, we envisage a fair amount of work before we have reached a mutually acceptable solution to the situation and expect discussions to continue throughout the summer.

As the first half your of 2024 draws to a close, we look back on the half year and concludes that the funds low volatility and liquidity premia niche continues to prove its worth. The performance has primarily been driven by (i) continued low default rates; (ii) a recovery in our real estate portfolio which suffered in 2022; and (iii) the increase in base rates. Despite this, the fund's current YTM remains at attractive levels and we see significant value to be harvested also in the second half of this year and beyond.

Key Risks

Investment in Fixed Income or Other Debt Securities All fixed income or other debt securities have the fundamental risk that the issuer may be unable to make interest payments or repay the capital. Generally, government securities offer the lowest credit risk, which is reflected in their lower yield. Corporate debt offers a higher yield due to its higher risk. However, changes in economic and political outlook affect the value of such securities.

Investment in High Yielding Debt Securities Due to the volatile nature of sub-investment grade assets and the corresponding risk of default, investors in Compartments which invest in high yielding debt securities must be able to accept significant temporary or permanent losses to their capital and the possibility of fluctuations in the income return level of the Compartment.

Liquidity Risk The ability of the Company to sell particular investments may be seriously restricted as a result of legal restrictions, low market capacity and the size and nature of the assets. As a consequence of such restrictions, the liquidation of some investments may prove to be difficult and prolonged, and may only be possible at a significant discount, thus affecting the liquidity and/or the investment performance of the Shares.

Redemption Risk Investors may redeem Shares in accordance with the terms set in this Memorandum. Large redemptions of Shares might result in a Compartment being forced to sell assets at a time and price at which it would normally prefer not to dispose of those assets. In addition, a significant redemption of Shares may require a Compartment to realise investments at values which are lower than the anticipated market values of such investments. This may cause a temporary imbalance in a Compartment's portfolio. Thresholds limiting the maximum amounts which may be redeemed in each Compartment on each Valuation Day will also be put in place. The Board may also, but will not be obliged to, temporarily suspend the determination of the Net Asset Value per Share of any Compartment and/or the issue and redemption of Shares in respect of a given Compartment under specific circumstances - including, without limitation, when the Board determines, in its sole discretion, that the proportion of assets of the relevant Compartment(s) valued under the Mark-to-Model Valuation represents a significant part of the total assets of the relevant Compartment(s).

More information in relation to risks in general may be found in the "Risk Factors" section of the prospectus.
