

MONTHLY FACTSHEET

Sustainable Corporate Bond 2XL

April 2024

This document is marketing material. It is only intended for Professional Investors. Please refer to the Prospectus before making any final investment decisions. Investments pose a risk. Performance related information refers to share class "SEK, Partner, Capitalization" ISIN: LU2180877529. Performance, Portfolio Breakdowns and Net Assets information as at: 30-04-2024. All other data as at 14-05-2024.

Too fast, too soon – time to take a step back?

During April, the risk sentiment continued to improve, similar to the equity markets. The fund yielded +0.98% during the month (+7.89% YTD) driven by (i) continued high coupons thanks to high underlying base rates; and (ii) a generally positive momentum across all sectors.

Due to the rapid improvement in risk sentiment in the last few months, we struggle to see attractive risk-adjusted return in most new bond issuances. We also find it increasingly challenging to identify new investment opportunities in the secondary market. Although we (too) see the positive incoming macro data and upbeat company specific news, our analysis shows that the "higher for longer" scenario may put pressure on issuers in most sectors, notably real estate companies with too much debt and weak shareholders. This could, in turn, result in another round of real estate worries (although with limited spill over to banks).

Consequently, we focus on the lower half of our credit risk spectrum which offers more liquid investment opportunities. We can safely harbour assets there until we see better value in slightly riskier assets. By substituting higher credit risk for financial risk, we create a better balance in the portfolio and still generate a meaningful return. Translating this into numbers and technical terms: we prefer the 300-400bps spread universe rather than 500bps+ as the optimal credit risk level inflection point on the efficient frontier has come down due to the increased risk appetite.

Despite the technicalities, it is important to remember that we are still investing in companies. Careful initial due diligence, thorough ongoing monitoring and responsible, value preserving actions in case they run into difficulties are determining factors for a long term, successful investment strategy and our entire investment process is geared for just that.

Finally, we are very pleased to announce that NCP is merging with the real estate and infrastructure manager Altaal. Together, the group manages EUR 500m, distributed over six investment strategies, with a team of about 20 employees across offices in Stockholm and London. The merger improves our investing and analytical capabilities and our ability to serve investors. The fund will continue to be managed by the same team as today, backed by the same investment committee and industry/sustainability advisors.

Emil & Jakob

There is no guarantee that high returns will be reached and there is a risk of losing all or part of your investment.

Nordic Credit Partners AB is not responsible for the damage, whether direct or indirect result of any defects or errors in the information. Investors acquire shares of the fund, not the underlying assets. The Fund is actively managed, which means that the investments are selected at the discretion of the investment manager. The performance of the Fund is not measured against any benchmark or index.

Key Risks

Investment in Fixed Income or Other Debt Securities All fixed income or other debt securities have the fundamental risk that the issuer may be unable to make interest payments or repay the capital. Generally, government securities offer the lowest credit risk, which is reflected in their lower yield. Corporate debt offers a higher yield due to its higher risk. However, changes in economic and political outlook affect the value of such securities.

Investment in High Yielding Debt Securities Due to the volatile nature of sub-investment grade assets and the corresponding risk of default, investors in Compartments which invest in high yielding debt securities must be able to accept significant temporary or permanent losses to their capital and the possibility of fluctuations in the income return level of the Compartment.

Liquidity Risk The ability of the Company to sell particular investments may be seriously restricted as a result of legal restrictions, low market capacity and the size and nature of the assets. As a consequence of such restrictions, the liquidation of some investments may prove to be difficult and prolonged, and may only be possible at a significant discount, thus affecting the liquidity and/or the investment performance of the Shares.

Redemption Risk Investors may redeem Shares in accordance with the terms set in this Memorandum. Large redemptions of Shares might result in a Compartment being forced to sell assets at a time and price at which it would normally prefer not to dispose of those assets. In addition, a significant redemption of Shares may require a Compartment to realise investments at values which are lower than the anticipated market values of such investments. This may cause a temporary imbalance in a Compartment’s portfolio. Thresholds limiting the maximum amounts which may be redeemed in each Compartment on each Valuation Day will also be put in place. The Board may also, but will not be obliged to, temporarily suspend the determination of the Net Asset Value per Share of any Compartment and/or the issue and redemption of Shares in respect of a given Compartment under specific circumstances - including, without limitation, when the Board determines, in its sole discretion, that the proportion of assets of the relevant Compartment(s) valued under the Mark-to-Model Valuation represents a significant part of the total assets of the relevant Compartment(s).

More information in relation to risks in general may be found in the “Risk Factors” section of the prospectus.

Key fund facts
